National University of Computer & Emerging Sciences • lahore • GPA: 2.83 • 08/2013 - 05/2017

PROJECTS

First Admin

beamLive

- Designed and implemented dynamic workflows for state machines in the system, maximizing efficiency and optimizing performance.
- Designed a portable & configurable admin panel that saves a lot of time to deliver the product to the client.
- Leveraged expertise in front-end and back-end technologies to deliver high-performance solutions.
- Collaborated closely with cross-functional teams to ensure seamless integration of mobile applications.

Cyber Intelligence Platform

Invozone

- Implemented a single sign-on feature that allows admin to jump from one sub-product to another without authenticating each time thus saving a lot of time.
- Designed and developed an Intelligence Dashboard to show all security solutions statistics using chart.js.
- Automating and syncing the CIP product with other security sub-products.
- Implemented new features and key modules, driving increased system functionality and performance.
- Developed comprehensive unit test cases for back-end functionality.

Privileged Access Management

Invozone

- Slack Integration to automate the notification generation for user's activity on the system.
- Worked on Key Management, privilege access management, and user Management modules.
- Implemented Features and revamped bugs.
- Wrote Unit test Cases system for the backend using jasmine.
- Transformed UI issues and optimized complex database queries, enhancing user experience.

Mayer Hatchery System

Freelance

- Converted raw SQL queries to sequelize ORM queries & optimized them system wide.
- Implemented new features & revamped UI/backend bugs.
- Designed & implemented microservices & automate the process of egg management.

Bitmal

Logicon

- Integrated third-party APIs (Xero, QuickBooks, stripe) with the back-end utilizing OAuth 2.0 for seamless functionality.
- Designed and implemented scalable back-end architecture, ensuring optimal system performance.
- Implemented new features and resolved bugs, delivering enhanced user experiences.

ClipBoard Health

ClipBoard Health

- Integrated backend APIs, fixing UI issues & bugs.
- Implemented & delivered the new features.
- Increased the system performance by optimizing the complex MongoDB queries system-wide.

Mail.O

Freelance

- Lead the project development & supervise the junior developers.
- Designed and implemented the client's requirements into reality & refactored the whole backend into a structured system.
- Classify & Scoring emails into categories by using chatGPT integration power.
